## Market model and central counterparty clearing

---

NBHYP2 and NBHYP5 bond forwards are traded in the current market structure for Swedish interest rate derivatives. Trades in forwards will be reached through bilateral negotiations between buyers and sellers, and reported to NASDAQ OMX for central counterparty clearing. The market committed banks will also support trading in the contracts, which will occur outside the exchange system.

Contract settlement takes place through a bilateral negotiation between buyer and seller. Following settlement, the transaction is reported to NASDAQ OMX Stockholm for clearing. Novation, meaning when the exchange substitutes existing contracts with two new ones, in relation to the buyer and seller takes place when the settlement is matched and collateral has been placed. Subsequently, there is no counterparty relationship between the buyer and seller; instead both parties have the exchange as counterparty.

## Contract base and settlement principles

---

The contract base is a synthetic bond with Nordea Hypotek AB as issuer and with a remaining maturity and coupon rate equal to the deliverable bond in each series. The forward contract is a combination of cash settlement and delivery of underlying cash instrument.

In practice, no payment takes place between the buyer and seller when the contract is cleared; instead, each party receives/pays from/to the exchange (the clearing house).

## Settlement and offsetting

---

All purchased and sold contracts are not offsettable against each other. This means that no net position is held against the clearing house.

Periodical settlement takes place on the last calendar day each month and cash settlement of the profit/loss is settled on the monthly cash settlement day.

## Name standard

---

Contracts are listed by the short name NBHYP followed relevant interest rate period (2 and 5) than letter designation for the expiration month.

<b>Expiration month</b>	<b>Name</b>
March	O
June	R
September	U
December	X
