

DEDICATED GATEWAY SERVICE

Take advantage of accessing the nasdaq omx nordic marketplaces via a dedicated gateway. NASDAQ OMX® provides firms with the unique opportunity to access liquidity of the nordic marketplaces via a dedicated gateway that is not shared with other firms and therefore avoid the potential impact of other firms trading activity.

ABOUT THE OFFERING

Available on Genium INET for both OMnet and FIX connections.

NASDAQ OMX Nordic offers all customers the opportunity to access the market by connecting via a production gateway dedicated uniquely to your firm and avoid the potential impact of other firms trading activity. Customers subscribing to this service will be granted exclusive use of a production gateway subject to the same service levels as any other production gateway. This service is primarily designed for firms engaged in high frequency trading where low latency is of outmost importance and is available for both co-located and extranet customers.

The dedicated OMnet gateway can sustain up to 1500 orders/sec.

By connecting to Genium INET via a dedicated OMnet gateway, customers will benefit from a latency reduction of approx 40 µs in average and a more consistent throughput.

Genium FIX gateway

Customers will have a dedicated FIX gateway for order entry and a guaranteed throughput of 1500 orders/sec per FIX gateway.

Each OMnet or FIX dedicated gateway entitles the customers to a rebate for the Genium INET Access invoicing.

GENIUM INET, OMNET AND FIX

Genium OMNet gateway

Two ports will be made available on each gateway and for optimal performances it is recommended that:

- > one port is dedicated to inbound traffic (orders and quotes)
- > one port for the outbound traffic. (market data)

Fail-over redundancy

- > For intra-site fail-over: customers can rely on ordinary shared gateways or request an additional dedicated gateway on the primary site.
- > For inter-site fail-over: customers can rely on existing shared gateways or request a dedicated gateway also on the secondary site
